EVANSVILLE, INDIANA

Ashworth will run for Vanderburgh **County Sheriff in Democratic primary**

Major Jason Ashworth has 28 years of law enforcement experience all with the Vanderburgh County Sheriff's office.

He has worked his way up from Corrections Officer in 1993 to his current position of Major and Commander of the Operations Division. During Jason Ashworth's tenure with the Vanderburgh County Sheriff's Office, he has worked with every law enforcement agency in the area, including at the local, state, and federal levels.

Jason Ashworth was assigned to the Criminal **Investigation Section** early in his career where he investigated and later supervised detectives who investigated high-level felonies and large-scale drug trafficking enterprises. After 14 years in the **Criminal Investigation** Section, Jason Ashworth was promoted to Lieutenant where he was assigned to protect the Civic Center, our Courts, and those who worked or visited there each day. Jason Ashworth was then promoted to Major

MAJOR JASON ASHWORTH

and assigned to command the Operations Division. The Operations Division consists of Motor Patrol Deputies, Detective Office, K9 Teams, Sex and Violent Offender Registry, Motor Fleet, Civil Process, Evansville-Vanderburgh County Joint Drug Task Force including those assigned to the Drug Enforcement Administration, and personnel assigned to the **United States Marshals** Fugitive Task Force. Maior Jason

Ashworth feels this experience will be vital while collaborating with members of our community, to continue keeping our residents and community safely, and to tackle the many issues facing law enforcement.

Major Ashworth says that he is humbled by the support of many in the community who have sparked immense gains in the campaign, including Vanderburgh County Commissioners Ben Shoulders and Jeff Hatfield,

Evansville City Councilman Zac Heronemous, Vanderburgh County Coroner Steve Lockyear, Vanderburgh County Councilman Mike Goebel, and State Representative Ryan Hatfield.

Major Jason Ashworth is proud to have the support of the last three Vanderburgh County Sheriffs. Their collective support is further indication that the people that best know what being the Sheriff entails, know that Jason Ashworth is the right person to lead the Office of Sheriff.

Major Jason Ashworth is a life-long resident of

Southwest Indiana, Growth Alliance for Greater Evansville and Southwest Indiana Chamber complete merger

EVANSVILLE, Ind. (April 1, 2021) –Today, the **Economic Development** Coalition of Southwest Indiana, Growth Alliance for Greater Evansville, and Southwest Indiana Chamber and their respective Boards – announce the official merge of the three organizations now operating in unison as the Evansville Regional Economic Partnership (E-REP).

"Now is the right time for this new public-private partnership to seize the opportunities that build on the regional cohesion that our three organizations

have cultivated," said Jim Ryan, the initial chair of the Evansville Regional Economic Partnership. "We are coming together to build an organization that is greater than the sum of its parts; an accomplishment which we can all be proud."

The unified organization will work to advance regional prosperity and global relevance by building on the trusted relationships and legacy of its predecessor organizations. E-REP areas of impact include new business attraction, a focus in business retention and

support of existing industry expansions, advancing pro-economy public policies, community development, entrepreneurship, talent attraction, quality of place enhancement, and strategies for regional growth.

"E-REP'S foundational principles are based on our commitment to equitable prosperity and to keeping small business front and center. We look forward to listening and learning from regional residents and businesses to deliver

Renewable energy offers options to landowners

Farmers and landowners across the Tri-State are excited this year at the prospect of having yet another year that becomes a bumper crop this coming fall at harvest time. Farmers and landowners are at the mercy of Mother Nature and the commodity markets and both of these drivers of prosperity or famine are not the most reliable or predictable things on earth. With prices for the principle crops in the region rising to short term highs things are looking good. Today is a great time to look at just what one can do with an acre of land in Southwest Indiana, Southern Illinois and Western Kentucky where prime farmland now fetches over \$10,000 an

Before delving into the modern world of land management, it is worth mentioning that land has been used for transportation and energy since the dawn of civilization. It takes approximately two acres of pasture land to support one horse with enough "fuel" to provide and sustain transportation for a year. When horses ceased to be used for transportation land was repurposed for modern agriculture thus making the land more valuable. After all, spending \$20,000 for a place to fuel and sustain a horse seems a bit much.

TRADITIONAL CROP **ROTATIONS**

There are many crops that can be grown in the

Background checks are infrastructure

BY MICHAEL LEPPERT

'or what seems like a lifetime, most of us have been anxiously waiting for life to return to normal. Two mass shootings in consecutive weeks remind us that regardless of how much we have grown to miss in the last year, not everything that is "normal," is OK. These horrific events and the circular nature of the gun control debate that accompanies them has become sadly routine. The sequence is predictable, commonplace and usual. But former Soviet Union. That only in America.

On March 16, a 21-year-old suspect in Georgia purchased a 9mm handgun and later the same day began his rampage in and around Atlanta, killing eight people. On March 22, another 21-year-old suspect shot and killed 10 people at a grocery store in Boulder, Colorado, using an SR-556, an AR-15 style, semi-automatic pistol, that he had bought just days earlier. Both gun purchases were made at licensed retailers.

Is there something, anything, that we could do that could have slowed, altered or prevented these two young, likely mentally ill, people from obtaining their weapons? That is a rhetorical question. The problem with the list of possible alternatives is not that it is too small, it's that it is too large.

"Our problems are man-made; therefore, they can be solved by man. And man can be as big as he wants," is part of my favorite speech from President John F. Kennedy, given at the

American University on June every person attempting 10, 1963. He was talking about diplomacy differences between us and the generational and perilous crisis was frightening and expensive to the U.S.

Fighting the Cold War for nearly half a century took infrastructure. Todav. after four full years of anxiously waiting for "infrastructure week" to actually occur, we have a new president preparing to push a big infrastructure bill through Congress. And again today, people think of roads, bridges, pipes and communications networks when the word is used. But the military is also infrastructure, like the enormous U.S. military that grew in the post-World War II years to combat the Soviets and the threat of communism.

Staying in the dictionary for a moment, the word, "infrastructure" means "the basic, underlying framework or leatures of a system or organization." Our schools, public safety systems, health care networks, and a good list of other things meet that definition equally well.

A modern information system to provide a background check on

to make any commercial purchase of a firearm is also infrastructure. Currently, that system is underdeveloped and underfunded, but it is definitely a basic, underlying necessity of this country. The support for properly building, implementing and investing in it has a similar level of support as roads, schools and broadband funding.

How is President Joe Biden planning to finance his \$3 trillion infrastructure plan? In a word, taxes. How will he expect to pass a new tax plan through a Senate that needs 60 votes to pass anything? Through the budget reconciliation process that Democrats used to pass the American Rescue plan a few weeks ago.

Are you following me? A universal background check system should be part of the infrastructure package and could be paid for by increasing the federal excise tax on guns and ammunition. And it can be done with 51 votes in the Senate. So, while the political class keeps debating the virtues and the perils of the filibuster, I recommend the Democrats get on with the business of the people.

Yes, I believe America's gun crisis has been more harmful than the Cold War. Maybe it has not been as expensive in dollars, but far more Americans have died by home grown gun violence. And the "man-made" aspect of our globally unique gun problem was created not by some phantom in a faraway land, but by the men living next door. Presumably, those men are taxpayers.

The federal excise tax on guns and ammunition generated \$653 million dollars in 2019. In April of 2015, Mother Jones published its investigation, in collaboration with Ted Miller of the Pacific Institute for Research and Evaluation, "The True Cost of Gun Violence," which estimated it to be \$229 billion, annually. Americans instinctively want to put all of their energy into arguing about how to shrink that big number. But growing the smaller number is the easier task. Let's do that.

Our gun violence problem is not a pothole or a main break, but it is equally obvious. Maybe if we could view it as a fiscal issue like any other infrastructure need, we could actually make some progress.

WHAT WE BELIEVE IN

The right to assemble and to seek redress of grievances is enshrined in our Constitution

BY STAFF THE OF THE CITY-COUNTY OBSERVER

ver the last several months we have witnessed peaceful and violent protests alike throughout America.

It's obvious that outside groups and agitators are attempting to foment lawlessness and unrest to advance their own objectives to cause anarchy in America. We are a nation born of the revolutionary spirit

of protest, coupling expressions of grievances against injustice with the desire to be free.

We deplore the theft, looting, and burning of businesses and historical landmarks caused by the random acts of lawless anarchists and thugs. In fact, we believe that these lawless thugs should be arrested and thrown in jail.

Everyone has been on edge, waiting to see when and where the next protest or riots will break out

and chaos reign. We're optimistic that restraints will be displayed by both the protesters and law enforcement alike.

However, criminal behavior, such as harmful objects being thrown at members of law enforcement, looting, and burning down businesses and historical sites shouldn't be tolerated and the lawless thugs should immediately be arrested and thrown in jail.

Law enforcement officers are human

and they make mistakes. We know that the overwhelming Amendment rights majority of law enforcement officials understands that carrying a badge carries a responsibility and understands when to use force and when to use restraint. We believe they also understand that they know what one bad decision will unleash. Finally, we oppose the **DEFUNDING** of law enforcement!

We support those who have taken to the streets to peacefully exercise their First to and express their opinion, anger, sorrow about issues that concern them. We don't support social disobedience or anarchy.

We also oppose economic, social, religious and political discrimination of people of all races, color, creed, and sexual orientation.

May God continue to bless America and help guide us through these troubling time.

Gries is serving us well

Thanks for job well done

Joe Gries has worked within the Vanderburgh County government for over 20 years. His governmental career started in the Knight Township Assessor's office where he valued property and ended up as the Real Estate Supervisor for the 2002 township wide reassessment.

In 2005 Joe became the Chief Deputy Auditor supervising the county's finances and payroll departments. Joe was

JOE GRIES

elected Vanderburgh County Auditor in 2010 and 2014. The County Auditor is the chief financial officer of the county and works closely with the County Council and Commissioners as well as all county elected officials preparing the yearly county budget.

In 2016 Joe joined the Health Department as the Administrator and has worked closely with our Health Officer, Board of Health, and staff to continue to improve the public health services provided to our community.

The City County Observer staff appreciates the way that Mr. Gries has handle every aspect of the COVID-19

pandemic. We consider his handling of the COVID-19 to be his crowning achievement in his 20 years in working in the pubic sector.

If you happened to see Mr. Gries sometime this coming weeks please thank him for a job well done during an extremely stressful and challenging time.

We are also very appreciative with how the fine staff at the Vanderburgh County Health Department have also perform during the pandemic.

COMMENTARY

Cleaner, greener and sustainable energy is a great step forward

BY JOE JACK WALLACE

t was recently revealed that CenterPoint Energy, the electric and gas utility provider for much of Greater Evansville and Southern Indiana is embarking on a mission to introduce more renewable energy technology into their generation operations. It was furthermore made known that CenterPoint Energy is adopting a number of Smart Energy strategies designed to provide cleaner power generation through investing in clean technologies and the sophisticated management techniques to deliver cleaner, more reliable power to their customer base at competitive pricing. All of this is good news and will make the Tri-State more attractive to companies seeking locations that are not only cost effective for their business operations that are concerned about environmental issues.

As a former resident who has been living in Southern California and working to advance renewable energy technologies, I applaud these commitments. The large solar generation facilities that CenterPoint Energy is planning have much potential for cost effective clean power delivery. We have many facilities like this in the deserts and their status as static generators of electricity has been providing clean energy for over a decade now. Some of the recent projects are actually less expensive to operate than the fossil fuel generation stations that they are replacing.

Personally, I invested in rooftop solar on the carbon neutral home we built when we moved to Palm Desert. In our case our rooftop system paid for itself in roughly five years. With the 20+ year life of the solar panels we are already enjoying the financial benefits of solar

ownership. This ability to do this is enhanced by time-of-use billing that enables us to sell our solar power to our local provider during the day and to buy our evening power at reduced rates after the sun has gone down. Time-of-use rate structures accelerate the adoption of clean power at the residential level and there is little or no transmission required when the power generation is literally on the roof.

Smart Energy strategies often utilize multiple power generation sources along with managed energy storage solutions like batteries and pumped hydro power. In a pumped hydro power station, solar panels pump water into a reservoir that is utilized later for power generation much like a dam does when the power demand is needed. Storage is vital to an integrated solution to be reliable. One of the things that California could do a better job on is reliability as storage has not kept up with the transition to renewable power. As we all know, solar does not work when the sun is down and wind power does not work when the wind is not blowing at a sustained speed above what it needed to spin the blades. In most large wind turbines the minimum wind speed to sustain generation is between 12 and 14 miles per hour. Wind turbines also need to be throttled

down when wind speeds are

so high that the dynamic forces of rotation literally can destroy the turbines. Energy storage of some type is vital to an effective Smart Energy strategy.

When I was an engineering student at the University of Evansville, my interest was to seek a career in the nuclear power industry. During my junior year, the accident at Three Mile Island set off an emotional national reaction that was fueled by a movie named The China Syndrome. The American public went into a media fueled paranoia that has led to the near demise

of nuclear energy. That is a crying shame because nuclear energy has zero green-house gas emissions and has literally generated safe clean energy now for more than half a century. I will not be the least bit surprised to see nuclear come back into the Smart Energy strategies of power providers. Quite frankly, Hollywood manipulated the minds of Americans to rob us of clean energy long ago.

CenterPoint Energy is embarking upon a series of investments and strategies that have the potential to slowly transition Greater Evansville from dirty expensive solutions to clean affordable power. This is a path to prosperity that I most certainly want to encourage.

Our good friend and former CCO Editor Joe Wallace wrote this article in support of CenterPoint Energy new mission to bring renewable solar technologies in our region. We totally support Mr. Wallace's opinions that he expressed in his well crafted Commentary.

Drug recognition experts recognized for impaired driving enforcement

INDIANAPOLIS

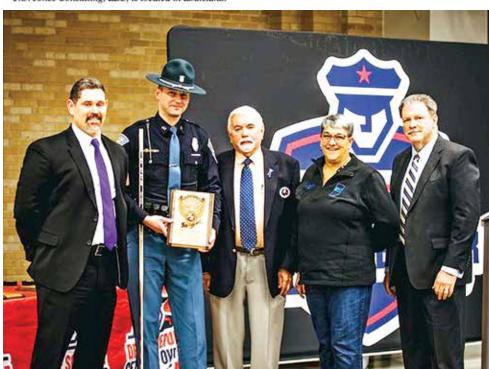

Announced today, the Indiana Criminal Justice Institute recognized 23 law enforcement officers as part of the annual Indiana Drug Recognition Expert Awards Program. A drug recognition expert (DRE) is a police officer who has received specialized training to help identify drivers under the influence of drugs or alcohol.

Now in its sixth year, the awards program was created by the agency to recognize the contributions made by Indiana's DREs. In total, ICJI presented 18 longevity awards for years of service, two leadership awards for going above and beyond, and two emeritus awards for contributions made in retirement. Awards were also presented to one officer based on the number of evaluations conducted and to Louisiana-based J.O. Jones Consulting, LLC, for its support of the program.

"Drug recognition experts are critical to taking impaired drivers off the road," said Devon McDonald, ICJI Execment to public safety."

awards were renamed in 2017 ty. in honor of fallen DRE offiin 2006.

County	Name	Agency	Award
Allen	Matthew Wilson	Ft. Wayne Police Department	Longevity Award (5 years)
Bartholomew	Corbin Smith	Indiana State Excise Police	Longevity Award (10 years)
Boone	Ben Phelps	Lebanon Police Department	Longevity Award (10 years)
Dekalb	James Bailey	Indiana State Police	Longevity Award (5 years)
Elkhart	Dustin Lundgren	Bristol Police Department	Longevity Award (10 years)

THE TRUTH ABOUT UTILITY-SCALE SOLAR

WHAT ARE THE HEALTH IMPACTS OF SOLAR?

There are no proven health risks from solar fields, and homeowners commonly have solar panels installed on their residences. A 2017 white paper from NC Clean Energy Technology Center¹ states:

"Photovoltaic (PV) technologies and solar inverters are not known to pose any significant health dangers to their neighbors. The most important dangers posed are increased highway traffic during the relative short construction period and dangers posed to trespassers of contact with high-voltage equipment. This latter risk is mitigated by signage and the security measures that industry uses to deter trespassing. As will be discussed in more detail below, risks of site contamination are much less than for most other industrial uses because PV technologies employ few toxic chemicals and those used are used in very small quantities. Due to the reduction in the pollution from fossil-fuel-fired electric generators, the overall impact of solar development on human health is overwhelmingly positive."

In fact, solar fields are known for having a positive benefit on air quality. Solar fields generate clean, renewable power with zero air emissions and often replace older and less-efficient fossil fuel-based sources of power with significant air emissions. A study from the National Renewable Energy Laboratory² shows that this corresponds to a lower risk of respiratory issues and heart attacks.

Solar fields are generally not associated with health risk from electromagnetic fields (EMFs). Humans are exposed to EMFs in their daily life, such as from a refrigerator. Similarly, EMFs generated within the solar field is at a low level and not enough to harm humans. You can read more about EMFs on the U.S. Environmental Protection Agency's website³.

1 https://nccleantech.ncsu.edu/resource_library/health-and-safety-impacts-of-solar-photovoltaics-pv/ | 2 https://www.nrel.gov/docs/fy07osti/41998.pdf 3 https://www.epa.gov/radtown/sources-electric-and-magnetic-radiation

WHAT IS THE FIRE RISK OF A SOLAR PROJECT SUCH AT THIS?

The risk of fire is extremely rare. Fire safety systems include sensors in the solar array that can pick up on a fire occurring in a specific section of the array. The sensors can notify maintenance and operation crew members and can then be powered off. The facility and equipment will be monitored 24/7 to ensure proper safety of the equipment and surrounding area.

The project is required to have a safety and security plan that details fire protection and related training. The project will work with local fire departments to ensure they have a thorough understanding of the project's low fire risk and the training/equipment necessary should a fire at the site occur.

WILL INCLEMENT WEATHER DAMAGE THE PANELS?

Solar panels are very robust and go through an extensive amount of testing for production and manufacturing approval. The glass is tempered, much like the glass used in automobiles. It is designed to withstand weather elements such as hail, rain and wind. Studies show panels can withstand quarter-sized hail for 30 minutes without significant damage.

Additionally, the site operator will have the ability to tilt panels based on weather radar to avoid direct weather element exposure. For example, the panels can be tilted in the opposite direction of incoming hail or snow to avoid impact or accumulation.

WILL THERE BE GROUNDWATER OR SOIL CONTAMINATION?

No adverse impact to ground water or soil is anticipated.

Solar panels do not consist of any liquids; therefore, if one were to be damaged, there would be no risk of contaminants spilling on the ground. The project will utilize solar panels composed of monocrystalline solar cells sandwiched between glass with a metal frame. This glass is strong and designed to last.

Furthermore, the U.S. Environmental Protection Agency's established tests demonstrate solar modules do not leach toxins into the environment.

Our project will be continuously maintained and monitored to ensure operations remain safe and environmentally sound. If a solar panel is damaged, the maintenance team will remove it and replace it.

WHAT IS THE IMPACT ON PROPERTY VALUES?

There are numerous factors that influence property values and the housing market, and no credible studies have shown an association between the presence of an operating solar field and negative long-term impact on the value of adjacent properties. Various reviews of solar fields and neighboring property values and home sales, including those utilizing data from Indiana, have confirmed there is no long-term impact.

We recognize that this perception exists among those opposed to solar, regardless of fact. The solar project has offered Good Neighbor Agreements to neighbors whose homes are in proximity to the solar field. The Good Neighbor Agreement serves to include neighbors in the project and provide compensation for perceived impacts. Similar to a lease agreement, the compensation provided through the Good Neighbor Agreement is an annual payment over the life of the solar field.

Operating solar fields have minimal impact on the surrounding area: no sound outside the fence line; no odor or emissions; no tall towers or equipment (solar panels typically sit 15 feet or less from the ground); and no increase in local traffic.

WHAT IS THE LONG-TERM IMPACT TO THE LAND?

Using farmland for solar under the current local ordinances does not change the long-term zoning classification for the land, allowing it to be returned to farming in future years. This is different from most other types of land use.

Using land for solar is similar to landowners putting farmland into the CRP program and comes with similar benefits to the land. For example, the land has time to rest and rejuvenate, and there is reduced use of fertilizer and pesticide – all factors that can improve soil quality. Soil erosion and run-off are controlled.

It is standard practice for a solar field to have a decommissioning plan and cost estimate prior to the start of construction.

Our plan calls for all solar panels and related infrastructure to be removed at end of the project's life. This includes the removal of all foundations. The land, rested and restored, is then returned to the landowner, at which time it can be returned to farmland or other previous use.

Education

Lawmakers shield schools from funding loss due

BY DYLAN PEERS MCCOY

As of September, about 360,000 Indiana students were enrolled in school virtually because of COVID-19, according to data collected by the Indiana Department of Education.

Alleviating a big worry for education leaders, Indiana legislators agreed Tuesday to provide full funding to most public schools for students studying virtually in the pandemic.

ENERGY

FROM PAGE 1

Tri-State but most large parcels are used for either corn or soybeans. A skilled farmer can expect to yield about 200 bushels of corn per acre that is selling today on the futures market for \$5.50, which means an acre will generate about \$1,100 of revenue for the farmer. For soybeans the yield is more like 60 bushels per acre but soybeans command \$14 per bushel and produce revenue of \$840 per acre. Both of these prices are up from previous years leading to increased land prices and money in the pockets of both farmers and land owners.

Land owners who do not farm can expect to be able to rent large parcels of prime farmland for between \$200 and \$300 per acre depending on the quality of the soil and the ease of farming it. Last

year was a good year for all and 2021 is expected to be as well.

Renewable Energy as a Crop

Farmers have been taking advantage of alternative fuels for years in the form of ethanol. The only purpose for selling a crop to manufacturers of ethanol is to see it used as a fuel in internal combustion engines. With the broad acceptance of renewable energy such as PV (photovoltaic) Solar or Wind Turbines, the output becomes electricity that can be sold at the grid level for significant revenue.

According to GreenCoast, a PV Solar installation can be expected to generate 357,000 kilo-Watt hours per year of electricity. At a rate of 5 cents per KWhr, a PV Solar farm will generate offer farmers electricity that will sell into the wholesale power markets for \$17,850 per acre. At 15 cents per kWhr the

revenue increases People do need to \$53,550 per year. Crops do not approach this kind of revenue. To install a grid level Solar Farm rated at 1 MW requires about 5 acres according to the National Renewable **Energy Lab** (NREL). An equivalent Wind Farm according to the same NREL report requires more like 85 acres but wind farms do make multiple uses possible.

While it is true that when the sun goes down and the wind does not blow these devices produce nothing but the predictability and reliability of the output is favorable to crop farming. PV Solar is predictable to within less than 5% in most locations over time.

Renewable energy farms and land owners an alternative to traditional farming and in many cases the crop of electrons is more lucrative.

food and so do the animals we eat. Farming for food will always be something that is needed. With modern agricultural techniques yields are higher than ever and soil does get depleted. Renewable energy is a real viable alternative to crop farming for landowners and it may just make the land value increase just like discarding the horse as the
